Dear Friends,

Welcome to our 40th annual production sale. Looking back 40 years to the first sale and 50 years to A.I. ing our first cows to Limousin brings back many memories of expectations and hopes of what the future might bring. We were commercial cattlemen and when we saw the first calves we made the decision to start in the seedstock business. We decided to manage our herd as we always had which kept us to the basics of using the feedlot as a culling facility. Now as we look back we are proud to still have strong relationships with some of our first customers as well as gaining new customers each year.

Limousin genetics offer muscle, feed efficiency and docility to crossbreeding programs. Purebred Limousin bulls on English based cows will give maximum hybrid vigor in one cross and give a consistent set of calves to take to market. Again we invite you to study the data in the catalog and supplement sheet to help in your decision making. We have collected DNA profiles and tested for Homo polled and Homo black. This makes it possible to have genetic enhanced EPDs to make them more accurate at a young age. As a result of a strict culling program this offering is consistent in growth, thickness and predictability to allow you to put together any size group that you need. We will keep and develop the yearling bulls until April at no charge in order to semen test them and collect all the final yearling data we need before delivery to you. We continue to offer a first breeding season guarantee on the bulls. The two year olds have been semen tested and are ready for you to take home sale day. If you take the older bulls and any females home sale day we will give you a \$50. credit off the purchase price.

The females have been selected from the heart of the herd for strong maternal and performance traits. They are guaranteed to be producers. The breds can start calving the second week of March so we would like you to take them right away to acclimate them to their new homes before they calve. If you need us to we will help make delivery arrangements.

We welcome you to come to view the cattle early on the 27th but if you can't we will show them to you anytime between now and then. We enjoy showing you our cows and feedlot as well as the sale cattle. Please look up DVAAuction.com and view videos of the entire sale offering and if you can't come on the 27th you can bid on line or call any of us or the sale crew to bid on the phone. Come early and enjoy a meal and of course a piece of pie.

Sincerely,
Symens Bros

Dear Friends,
The Symens Brothers 40th annual production sale represents a family commitment to excellence and customer service. Plan to be with us February 27, as this firm offers an outstanding set of Limousin bulls and females for your appraisal.

The Symens Brothers 49 years experience in the Limousin business and their commitment to developing superior seedstock and to customer satisfaction is second to none – study the information available in this catalog BW, WW, YW, EPD'S, ultrasound scan data, DNA test for polled and coat color. Also, profiles were done and are reflected as Genomically Enhanced EPDS.

The Symens Brothers recently exhibited bulls in the National Western Pen & Carload Show in Denver –marking their 46th consecutive time. True to form – SYES bulls were competitive as always. Showing a very competitive Pen of 3 March 2019 black purebred calves.

The Symens Brothers commitment to producing superior proven and predictable seedstock is obvious when you study their strong herd bull battery and extensive A.I. program. They also partner or purchase to feed many Limousin sired feeder calves from their bull customers.

The Symens Brothers success in the seedstock business is your assurance that you also will be a satisfied customer.

Sincerely,
Ken Holloway

GE-EPDs The value of Genomic Enhanced EPDs

Limousin has switched to Bolt-IGS single step genetic evaluation along with 11 other breeds. The IGS system just puts different numbers on the epds but the animals are still compared to each to each other the same way but are more accurate. These epds will be re-evaluated more often than before so will change more often. Our catalog was printed with current numbers and you can see how they rank with all other non-parents. The purebreds are compared with purebreds and the lim-flex compared with lim-flex.

Limousin breeders and their commercial customers benefit greatly from new breeding and selection tools. The North American Limousin Foundation (NALF) has been publishing genomic-enhanced EPDs {GE-EPDs} since the fall 2015 international cattle evaluation. This provides GE-EPDs for all Limousin and Lim-Flex animals that have completed DNA testing for genomic profiles.

GE-EPDs provide more precise EPDs based on a combination of pedigree, phenotype, and DNA. One major benefit is risk reduction through increased accuracy value on many traits - equivalent to having 8-20 progeny. This saves time when assessing young breeding stock and delivers commercial customer confidence when buying seedstock.

The information from the genomic data can be as informative as a bull's first calf crop or a cow's lifetime production record. Since the genomic data is incorporated directly into the EPDs, cattle producers will not have to learn how to interpret the new data.

Use the following codes to quickly find the bulls that fit your needs.

- B** is assigned to the bulls that we could recommend for use on heifers based on EPDs, actual birth weight and body type.
- G** stands for growth which is above average in genetic ability for growth traits.
- M** stands for milk and maternal value, the daughters of these bulls should make good replacements in commercial or seed stock operations.

Those animals excelling in more than one trait will have more than one code letter. Those not above average in any traits will not have a code assigned to them, but in most cases will be well balanced and complete in their own makeup.

If you look under the EPD block of information, there is a % rank with numbers showing traits in which that animal ranked in the top 50% or higher. This will help you select bulls high in the traits you are looking for.

A QUICK GUIDE TO LOCATE TRAITS YOU ARE LOOKING FOR:

Bull to use on heifers:	Bulls with above 50% marbling	Homo Polled and Homo Black

Young bull with lots of growth potential.
 Homo Polled

The bred heifers were preg-checked by ultrasound on September 6, 2019. The footnotes show the AI dates and exposure dates and if they were called safe to AI or bred to the bulls used for clean-up. We used bulls on the heifers that we have confidence in for calving ease. The bred heifers have been vaccinated for scour prevention. Those bred earliest will be due shortly after the sale and we will help arrange delivery as soon as possible. The open heifers can also be delivered as soon as you need them.
